Guidelines International Network

The Guidelines International network, G-I-N, is a global network, founded in 2002. It has grown to comprise 99 organisational and 154 individual members representing 47 countries from all continents at February 2017. The network supports evidence-based health care and improved health outcomes by reducing inappropriate variation throughout the world.

Our mission is to lead, strengthen and support collaboration and work within the guideline development, adaptation and implementation community. As a major player on the global healthcare quality stage, G-I-N facilitates networking, promotes excellence and helps our members create high quality clinical practice guidelines that foster safe and effective patient care.

G-I-N seeks to improve the quality of health care by promoting systematic development of clinical practice guidelines and their application into practice, through supporting international collaboration.
